

**Aim:**

To write a python program to calculate the temperature conversion. To convert Fahrenheit to Celsius and Celsius to Fahrenheit

**Algorithm:**

## **Program:**

```
print("\t\t*****MENU*****")
print("1.From Fahrenheit to Celsius")
print("2.From Celsius to Fahrenheit ")
print("3.Exit")
choice = int(input("Enter choice(1/2/3):"))
if (choice == 1):
    F = int(input("what is the Fahrenheit? "))
    C=(F - 32) * 5/9
    print("Celsius is =",C)
elif (choice == 2):
    C = int(input("what is the Celsius? "))
    F= (C * 9/5) + 32
    print("Fahrenheit is =",F)
elif (choice == 3):
    exit()
else:
    print("Invalid input")
```

**Output:**

**Result:**

Ex.No.2

## CHECK THE STUDENT GRADE

### Aim:

Write a python program to check our student grade for the given marks

### Algorithm:

**Program:**

```
sub1=int(input("Enter marks of the first subject: "))
sub2=int(input("Enter marks of the second subject: "))
sub3=int(input("Enter marks of the third subject: "))
avg=(sub1+sub2+sub3)/3
if(avg>=80):
    print("Grade: A")
elif(avg>=70 and avg<80):
    print("Grade: B")
elif(avg>=60 and avg<70):
    print("Grade: C")
elif(avg>=40 and avg<60):
    print("Grade: D")
else:
    print("Grade: E")
```

**Output:****Result:**

Ex.No.3

## **AREA OF SHAPES**

### **Aim:**

Write a python program to find out and display the area calculation for the given shapes

### **Algorithm:**

**Program:**

```
def square(length):
    area_square = length ** 2
    print ("the area of your square equals %s" %(area_square))

def rectangle(length, width):
    area = length * width
    print ("The area of your rectangle equals %s" %(area))

def triangle(height, base):
    area_triangle = height * base * 0.5
    print ("the area of your triangle equals %s" %(area_triangle))

def circle(pi, radius):
    area_circle = pi * (radius ** 2)
    print (" the area of your circle equals %s" %(area_circle))

print ("\t Area calculator")
print ("-----")
def calculation():
    print ("\t MENU")
    print ("-----")
    print ("1.Square, 2.Rectangle, 3.Triangle, 4.Circle 5.Exit")
    print ("Enter your choice")
```

```
user_shape = int(input())

if user_shape == 1:

    square(length = float(input("please type the length of the square")))

elif user_shape == 2:

    rectangle(length = float(input("please type the length of the rectangle")), width =
float(input("please type the width of the rectangle")))

elif user_shape == 3:

    triangle(height = float(input("please type the height of the triangle")), base =
float(input("please type the base length of the triangle")))

elif user_shape == 4:

    circle(3.14, radius = float(input("please type the radius of the circle")))

elif user_shape == 5:

    exit()

else:

    print ("That's not in the choices!, Try again")

    calculation()

calculation()

choice = input("Would you like to calculate the area of a different shape?(yes/no)")

while choice == "yes":

    print ("-----")
    calculation()
```

**Output:**

**Result:**

Ex.No.4

## FIBONACCI SERIES

### Aim:

Write a python program to display the Fibonacci series for the given times

### Algorithm:

### **Program:**

```
n = int(input("Please Enter the Range Number: "))

i = 0

first = 0

second = 1

while(i < n):

    if(i <= 1):

        Next = i

    else:

        Next = first + second

        first = second

        second = Next

    print(Next)

    i = i + 1
```

### **Output:**

### **Result:**

Ex.No.5

## FINDING FACTORIAL

### Aim:

To write a python program to find and display the factorial value for the given number

### Algorithm:

**Program:**

```
n=int(input("Enter number:"))
fact=1
while(n>0):
    fact=fact*n
    n=n-1
print("Factorial of the number is: ")
print(fact)
```

**Output:****Result:**

## Ex.No.6    **SUM OF THE SERIES FOR $1 - 2/2! + 3/3! - \dots - n/n!$**

### **Aim:**

Write a python program to find sum of the following series for n terms:  $1 - 2/2! + 3/3! - \dots - n/n!$

### **Algorithm:**

**Program:**

```
def sumofseries(num):
    res = 0
    fact = 1

    for i in range(1, num+1):
        fact *= i
        if(i%2==0):
            res = res - (i/ fact)
        else:
            res = res + (i/ fact)

    return res

n =int(input("Enter the range"))
print("Sum: ", sumofseries(n))
```

**Output:**

**Result:**

**Aim:**

Write a python program to calculate the matrix of sum and product for the given two matrices and display it

**Algorithm:**

**Program:**

```
X = [[1,2,3],  
     [4,5,6],  
     [7,8,9]]
```

```
Y = [[1,2,3],  
     [4,5,6],  
     [7,8,9]]
```

```
result = [[0,0,0],  
          [0,0,0],  
          [0,0,0]]  
  
print("Matrix Addition")  
  
for i in range(len(X)):  
    for j in range(len(Y[0])):  
        result[i][j] += X[i][j] + Y[i][j]  
  
  
for r in result:  
    print(r)  
  
print("Matrix Multiplication")  
  
for i in range(len(X)):  
    for j in range(len(Y[0])):  
        for k in range(len(Y)):  
            result[i][j] += X[i][k] * Y[k][j]
```

```
for r in result:
```

```
    print(r)
```

**Output:**

**Result:**

## **Ex.No.8 CREATE MATHEMATICAL 3D OBJECTS**

### **Aim:**

Write a python program and to create mathematical 3D objects in visual python

### **Algorithm:**

## **Program:**

```
import matplotlib.pyplot as plt
from matplotlib.patches import Ellipse
plt.axes()
print ("MENU")
print ("1-Circle")
print ("2-rectangle")
print ("3-Arrow")
print ("4-Ellipse")
print ("5-Polygon")
ch=int(input("enter Choice = "))
if ch==1:
    circle = plt.Circle((0, 0), radius=0.75, fc='y')
    plt.gca().add_patch(circle)
elif ch==2:
    rectangle = plt.Rectangle((10, 10), 100, 100, fc='r')
    plt.gca().add_patch(rectangle)
elif ch==3:
    arrow = plt.Arrow(1, 1, 0.5, 0.5)
    plt.gca().add_patch(arrow)
elif ch==4:
    ellipse = Ellipse((3, 3), 0.4, 0.2)
    plt.gca().add_patch(ellipse)
elif ch==5:
    points = [[2, 1], [6, 1], [8, 4]]
    line = plt.Polygon(points,facecolor='g', edgecolor='r', linewidth=3.0)
    plt.gca().add_patch(line)
else:
    print ("Invalid Choice")
plt.axis('scaled')
plt.show()
```

**Output:**

**Result:**

**Aim:**

Write a python program and display the histogram in visual python

**Algorithm:**

**Program:**

```
import numpy as np
import matplotlib.pyplot as plt
data = [1,11,21,31,41]
plt.hist([1,11,21,31,41,51], bins=[0,10,20,30,40,50,60], weights=[10,1,40,33,6,8],
edgecolor="red")
plt.show()
```

**Output:**

**Result:**

**Aim:**

Write a python program to display the sine and cos waves in the visual python

**Algorithm:**

**Program:**

```
import matplotlib.pyplot as plt  
  
import numpy as np  
  
st=np.arange(0,10,0.1)  
  
ct=np.arange(0,10,0.1)  
  
sine=np.sin(st)  
  
cos=np.cos(ct)  
  
plt.plot(st,sine)  
  
plt.plot(ct,cos)  
  
plt.title("Sine, Cos, Polynomial and Exponential Waves")  
  
plt.xlabel("Time")  
  
plt.ylabel("Sin and Cos (Time)")  
  
plt.show()
```

**Output:**

**Result:**

Ex.No.11

## PULSERATE VERSES HEIGHT

### Aim:

Write a python program to display the graph for pulse rate and height variance

### Algorithm:

## **Program:**

```
import numpy as np  
import matplotlib.pyplot as plt  
  
x=[ ]  
y=[ ]  
  
for n in range(6):  
    p = int(input('Enter pulse rate'));  
    h = int(input('Enter the height'));  
    x.append(p)  
    y.append(h)  
  
plt.plot(x,y)  
plt.title("Pulse rate vs Height")  
plt.xlabel("Pulse rate");  
plt.ylabel("Height");  
plt.show()
```

**Output:**

**Result:**

**Aim:**

Write a python program and to display the graph for time and velocity variance in velocity acceleration

**Algorithm:**

## **Program:**

```
import numpy as np  
  
import matplotlib.pyplot as plt  
  
x=[ ]  
  
y=[ ]  
  
t = 0  
  
et =int(input('Enter end time'));  
  
a = int(input('Enter the Acceleration'));  
  
u = int(input('Enter the Initial Velocity'));  
  
while (t<=et):  
  
    v = u + a * t  
  
    x.append(t)  
  
    y.append(v)  
  
    t = t + 1  
  
plt.plot(x,y)  
  
plt.title("Velocity acceleration")  
  
plt.xlabel("Time");  
  
plt.ylabel("Velocity");  
  
plt.margins(0)  
  
plt.show()
```

**Output:**

**Result:**

## **Ex.No.13 GRAPH FOR TIME AND DISTANCE**

### **Aim:**

Write a python program and to display the graph for time and distance variance in velocity acceleration

### **Algorithm:**

## **Program:**

```
import numpy as np  
  
import matplotlib.pyplot as plt  
  
x=[ ]  
  
y=[ ]  
  
t = 0  
  
et =int( input('Enter end time'));  
  
a = int(input('Enter the Acceleration'));  
  
u =int( input('Enter the Initial Velocity'));  
  
while t<=et:  
  
    v = u + a * t  
  
    d = v * t + 0.5 * a * t ** 2  
  
    x.append(t)  
  
    y.append(d)  
  
    t = t + 1  
  
plt.plot(x,y)  
  
plt.title("Velocity acceleration")  
  
plt.xlabel("Time");  
  
plt.ylabel("Distance");  
  
plt.margins(0)  
  
plt.show()
```

**Output:**

**Result:**

## **Ex.No.14     GRAPH FOR VELOCITY AND DISTANCE**

### **Aim:**

Write a python program and to display the graph for velocity and distance variance in velocity acceleration

### **Algorithm:**

## **Program:**

```
import numpy as np  
import matplotlib.pyplot as plt  
  
x=[ ]  
  
y=[ ]  
  
t = 0  
  
et = input('Enter end time');  
  
a = input('Enter the Acceleration');  
  
u = input('Enter the Initial Velocity');  
  
while t<=et:  
  
    v = u + a * t  
  
    s = (v * v - u * u) / 2 * a  
  
    x.append(v)  
  
    y.append(s)  
  
    t = t + 1  
  
plt.plot(x,y)  
plt.title("Velocity acceleration")  
plt.xlabel("Velocity");  
plt.ylabel("Distance");  
plt.margins(0)  
plt.show()
```

**Output:**

**Result:**
